

SpectralAuditO

See through fake audio quality. Bulk-scan your music and video library with real spectral analysis -- catch upscaled MP3s, lossy-in-lossless fakes, clipping, and corrupt files before they ruin a set.

[Request a licence](#)[See it in action](#)

Real detection, not guesswork

SpectralAuditO decodes the actual audio and runs spectral (FFT) analysis to find the frequency cutoff a lossy encoder leaves behind -- the tell-tale sign of a file that's been upscaled or mislabeled, no matter what the container metadata claims.

Fake & quality detection

Finds the real encoded bitrate tier from the spectrum itself, flags transcoded-up files and lossy-in-lossless fakes, and catches truncated/corrupt files and clipping.

Graduated Club-Grade score

A 0-100% score -- shown as Wi-Fi-style signal bars -- rating how safe a track is to play at volume, blending bitrate tier, true-peak headroom, suspicion flags, and loudness range into one number.

Musical metrics (Elite)

Opt-in BPM/beatgrid, musical key with Camelot-wheel notation, and a 1-10 perceptual energy rating -- shown as separate columns and exported to every report.

DJ library integration

Scan straight from Rekordbox, VirtualDJ, or Serato, and write verdicts back into your library so flagged tracks are visible right in your DJ software.

File operations, done safely

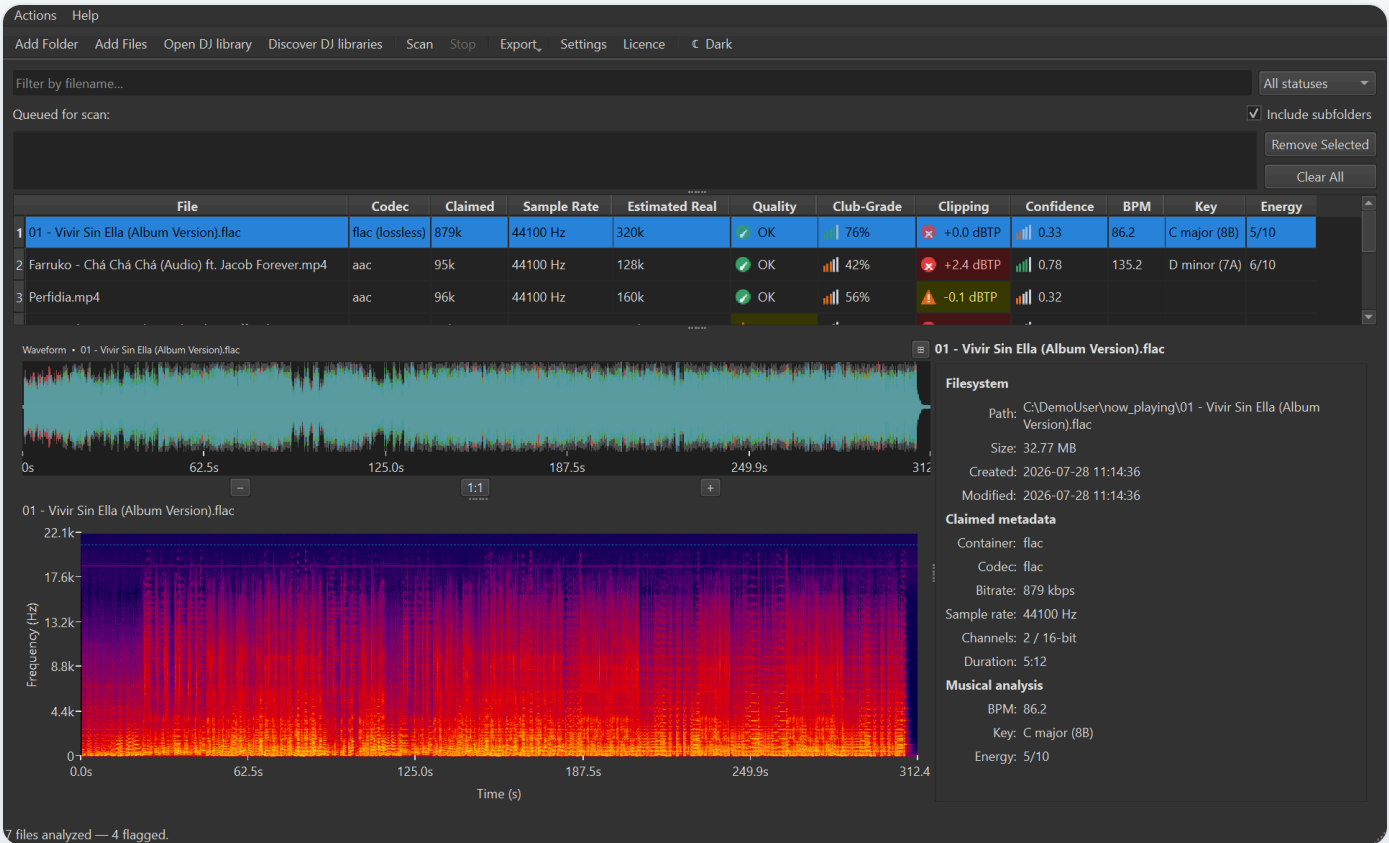

Rename, move, copy, delete, or fix bitrate tags in bulk -- every action shows a dry-run preview first, and a full undo journal has your back.

CSV / JSON / HTML reports

Export every metric to CSV or JSON for your own analysis, or a self-contained HTML report with an analytics dashboard and embedded spectrogram thumbnails.

See it in action

A real scan across a mixed library -- genuine lossless and lossy files, a transcoded fake, real clipping, and a corrupt file, each caught and explained.

Results table with per-file verdicts, Club-Grade score, and the spectrogram view for the selected track.

Appearance

Theme Dark

Presets

Defaults Save as... Delete

Segments sampled per file 12

Segment duration (s) 2.00

Shelf drop threshold (dB) 25.00

Shelf persistence (Hz) 300.00

Fake tolerance (tiers) 1

Silence gate (dBFS) -50.00

Deep (anti-forgery) checks auto

Sample clip threshold (dBFS) -0.10

True peak ceiling (dBTP) -1.00

Per-channel clipping analysis ☒

Full-file clipping pass (slower) ☐

BPM / key / energy detection (Elite) ☒

Logging

Log level DEBUG

Log folder C:\DemoUser\specaudit Browse... Open log folder

Max log file size 10 MB

Rotated backups to keep 3

Media cache

Waveforms: 1.9 MB | Spectrograms: 1.4 MB (total 3.3 MB) Clear waveforms Clear spectrograms

Reset to defaults OK Cancel

Every detection threshold is tunable -- nothing is a hardcoded magic number.

Choose your tier

Free to try, Pro to unlock everything, with optional add-ons for DJs and power users.

Free

Pro

\$0

- ✓ 50 files per session
- ✓ Full detection engine
- ✓ Spectrogram viewer

**One-time /
subscription**

- ✓ Unlimited scanning
- ✓ CSV / JSON / HTML export
- ✓ Rename, move, copy, delete, tag writing

**Pro + DJ
Add-on**

- ✓ Everything in Pro
- ✓ Rekordbox / VirtualDJ / Serato read & write-back

**Pro + Elite
Add-on**

- ✓ Everything in Pro
- ✓ BPM / key / energy detection
